

Litterless Lunch Worksheet

Supervising Teacher/s: _____

School: _____

- Garbage generated from meals must be collected and weighed (in kg) at the end of each day. Record daily totals in the chart below.
- At the end of each school week, visit www.earthrangers.com to submit your data and track how much carbon your school has saved.
- Note - it is important to keep all waste generated from other activities (i.e. crafts and school work) separate from that generated from meals, as this will interfere with the desired results of your Litterless Lunch campaign.
- Once submitted on the website, the weight of garbage collected on the first day of the campaign will act as a baseline for your overall reduction. Each of the following days will be compared to this baseline, which will illustrate to students the volume of garbage that has been reduced.
- The Litterless Lunch campaign can be implemented for any length of time. We suggest you set a goal for your school, such as a 50 per cent reduction compared to the first day of the campaign.
