Walking School Bus Worksheet

Supervising Teacher/s: _____
School: _____

- Plan the walking routes ahead of time
- Ensure there are daily volunteers to monitor the safety of each route
- Decide on the duration of your campaign – one week, one month, school year
- If your students are enthusiastic to implement a walking school bus but a daily schedule is too difficult, try once a week or once a month and increase the frequency from there.

Recording Data

- It may be easiest to have a white board with the information that we've listed below so that students can directly participate with the tracking, and see their success firsthand.
- Teachers will initially input student name, distance from home to school (in km) and usual mode of transportation, when they first transfer information to the Earth Rangers website. Every time you enter new data, these fields will already be recorded. You will also be able to edit, delete or add students if needed).
- Teachers will multiply the number of times each student walked in the week by 2 if the student walked both to and from school (i.e. you can have an odd number if a student can only walk mornings)
- If a student walks a different distance each day, the teacher can input their name numerous times on the chart, specifying how many times the student walked during the week.
- At the end of every school week, submit your data at www.earthrangers.com and track how much carbon your school is saving!

Student Name	Distance from Home to School (km)	Usual mode of transportation	# of times student walked in week ___	Distance walked instead of km driven
